	Office Action Summary	10/047,330	CARTLIDGE, AND	REW G.			
•	Onice Action Summary	Examiner	Art Unit				
	The MAILING DATE of this communication one	Gail Verbitsky	2859				
	The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status

DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In this case, the claim language is confusing because claim 19 which claim 12 is dependent, is a method claim which does not claim a system or an illumination source. Perhaps applicant should replace "claim 19" in line 1 with –claim 10-. Is this a proper interpretation of the invention? Furthermore, please note that in the rejection on the merits of claim 12, the Examiner considers that claim 12 is dependent on claim 10.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-10, 12-16, 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuyuki et al. (U.S. 5876327) [hereinafter Tsuyuki].

Art Unit: 2859

Tsuyuki discloses in Fig. 1 an optical system comprising an optical sensor (CCD camera) 48 having an array of light receptors having a pixel pitch, lens (imaging lens system) 43 associated with the camera along the optical path, the lens configured with optical parameters (magnification, and numerical aperture with a stop 44) that should inherently be compatible (functionally related) to the camera and thus, to the pitch and a desired (effective) resolution (col. 7, lines 46-47) of the camera and thus, the optical system. The lens, along with a variable stop 44, can map an image (a portion) of an object to an associated light receptors of the camera. Inherently, there is an illumination source (visible or non-visible) to illuminate the object.

For claims 2, 6 and 14-16: this is inherent that the magnification is related to a desired (effective) resolution and a pixel pitch, and thus, it is related to their ratio. It is also inherent that a numerical aperture is related to a wavelength of the light of the illumination source and a desired resolution, and thus, the numerical aperture is related to their ratio.

For claims 3 and 15: according to formula (5), the numerical aperture is functionally related to a ratio of a wavelength (lambda) of a light illuminating the object and a frequency, while the frequency is related to an effective resolution, thus, the numerical aperture is functionally related to a ratio of a wavelength (lambda) of light illuminating the object and the effective resolution.

For claims 4 and 18: as shown in equations in col. 8, the desired (allowed) resolution is limited (at least equal) by diffraction limit in the extremely small aperture diameter (spot size). Also, the particular value (size) of a resolution, as stated in claims 4 and 18,

Application/Control Number: 10/047,330

Art Unit: 2859

absent any criticality, is only considered to be the "optimum" value of the resolution for the system disclosed by Tsuyuki that a person having ordinary skill in the art would have been able to determine using routine experimentation based, among other things, on the desired accuracy of the device, the intended use, etc. *In re Boesch, 205* USPQ 215 (CCPA 1980).

For claim 7: the device comprises an aspherical lens (col. 9, line 43).

For claim 8: a first lens 43 positioned closer to an object and having the focal length minus 38.308 which is less than the focal length of plus 12.496 of the second lens 46 positioned closer to the camera 48 (col. 13, lines 14-50 and Fig. 13).

For claim 13-16 and 19: the method steps will be met during the normal manufacturing process of the system stated above.

5. Claim 11 rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuyuki as applied to claims 1-10, 12-16, 18-20 above, and further in view of Pollard et al. (U.S. 6249360) [hereinafter Pollard].

Tsuyuki discloses the device and the method as stated above in paragraph 4.

Tsuyuki does not explicitly state that the illumination source is an LED.

Pollard discloses a system wherein an illumination source is an LED.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to replace the illumination source disclosed by Tsuyuki with the LED, as taught by Pollard, because both of them are alternate types of

Art Unit: 2859

illumination sources which will perform the same function of illumination an object of interest, if one is replaced with the other.

Allowable Subject Matter

6. Claim 17 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

- 7. The prior art made of record and not relied upon considered pertinent to applicant's disclosure.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Verbitsky who can be reached at (703) 306-5473 Monday through Friday 7:30 to 4:00 ET.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-5473.
